FOREWORD

THE SIMPLEX ACTUARY for Lumbermen is published in response to a demand from leading Retail Lumber Dealers thru-out the country who have long recognized the advantages and simplicity of quoting lumber prices by the piece or by the lineal foot, but who have heretofore been discouraged by the enormous task of figuring out at one time all the piece prices carried in the average lumber yard, every time there is a fluctuation in prices.

With The Simplex Actuary it takes only an hour or two at the most to make up a complete new set of prices per lineal foot and per piece as well as price per thousand B. M. if so desired, with the knowledge that every price is pre-figured, re-figured, cross checked and proved. The Simplex Actuary is an open gate, heretofore closed, thru which the Retail Lumber Dealer can now take a short cut to the direct answer so long desired by the consumer.

It is with the sincerest wish of the Author for abundant success to every Retail Lumber Dealer of the country in meeting the problems of modern merchandising and with a firm faith that The Simplex Actuary will prove a very material aid in that direction, that this book is offered to the Trade.

EARL M. HIATT.

HOW TO USE THE SIMPLEX ACTUARY

The Simplex Actuary presents on one page all the different sizes and lengths of lumber carried in the ordinary retail lumber yard. It shows the price per piece and per lineal foot of all these sizes and lengths at the same price per thousand board feet. These prices are figured in steps of \$1.00 per thousand board feet from \$25.00 to \$150.00 and in steps of \$5.00 from \$150.00 to \$200.00.

The first three columns and the last two columns on each page show the different sizes and the remaining columns show the price per piece for the length as indicated at the head of the column. The first column carries the sizes in which the board feet are figured as being one inch thick and is headed by the term "Inch". The second column headed "Plank" contains the sizes two inches thick the third column headed Tmb., contains the larger size timbers. The fourth column headed L. F., shows the price per lineal foot for the respective sizes. The last columns show the sizes of lumber $1\frac{1}{4}$ " and $1\frac{1}{2}$ " thick respectively. The other columns are headed by the figures 4, 6, 8, 10, 12, 14, 16, 18, 20, 22, 24 indicating the regular lengths for which piece prices are figured.

In determining the lineal foot price of any size the figures are carried out to the fourth decimal part of a dollar which is the hundredth part of a cent or the tenth part of one mill. If the fourth place is a half of a mill or more the mills are increased by one and the fourth place left off. If the fourth place is less than one half of a mill it is left off and the mills remain the same. For example, if the lineal foot price on a 2x4 at \$50.00 per thousand board feet is \$.0333 the fraction three cents and three mills is used thus .033. When the lineal foot price of a 2x4 at \$55.00 per thousand is \$.0366 we use the fraction \$.037. In this way the difference in price caused by taking or dropping the fraction never amounts to more than one cent on the longest piece and the places where a cent is added and where a cent is dropped balance each other.

To use The Simplex Actuary to make up new price lists turn to the price per thousand at which you intend to sell your 2x4s for instance. Go down the second column from the left hand side until you come to the 2x4 line, lay a blotter or ruler along that line then finding the length at the top of column follow down on the left or right hand side of the line as the case may be until you come to your blotter and the price per piece is before you. If you are selling the same length pieces of 2x6s and 2x8s at the same price per thousand board feet you can follow down the same column on the same page until you come to the 2x6 and 2x8 respectively. If you prefer to sell different lengths of dimension at different prices per thousand just turn to the proper price page as before. Just a little practice will enable you to turn to any price you may select and without any trouble find the size and the length desired easily and without any chance of error.

TO CHANGE BOARD FEET OF LUMBER TO LINEAL FEET

Multiply Board Feet of 1x2 by 6	Multiply Board Feet of 1x6 by 2
Multiply Board Feet of 1x3 by 4	Multiply Board Feet of 1x8 by 1 1-2
Multiply Board Feet of 1x4 by 3	Multiply Board Feet of 1x10 by 1 1-5
Multiply Board Feet of 1x5 by 2 2-5	Multiply Board Feet of 1x12 by 1

TO ESTIMATE LINEAL FEET OF LUMBER NECESSARY TO COVER SQUARE FEET OF SPACE

For 1x3	Flooring $2\frac{1}{4}$ in. Face, multiply Square Feet by 5 1-3
For 1x4	Flooring $3\frac{1}{4}$ in. Face, multiply Square Feet by 3 3-4
For 1x6	Flooring $5\frac{1}{4}$ in. Face, multiply Square Feet by 2 1-3
For 1x8	Ship Lap. $7\frac{1}{4}$ in. Face, multiply Square Feet by 1 3-4
For 1x10	Ship Lap. $9\frac{1}{4}$ in. Face, multiply Square Feet by 1 1-3
For 1x6	Drop Sdg. $5\frac{1}{4}$ in. Face, multiply Square Feet by 2 1-3
For 1x4	Roof Sheathing Spaced 2 in., multiply Square Feet by 2
For 1x6	Roof Sheathing Spaced 2 in., multiply Square Feet by 1 1-2
For 1x8	Roof Sheathing Spaced 2 in., multiply Square Feet by 1 1-5
For 1x10	Roof Sheathing Spaced 2 in., multiply Square Feet by 1
For $\frac{1}{2}$ x4	Bev. Lap Sdg. Exposed 3 in., multiply Square Feet by 4
For $\frac{1}{2}$ x4	Bev. Lap Sdg. Exposed $2\frac{3}{4}$ in., multiply Square Feet by 4 1-2
For $\frac{1}{2}$ x6	Bev. Lap Sdg. Exposed 5 in., multiply Square Feet by 2 1-2
For $\frac{1}{2}$ x6	Bev. Lap Sdg. Exposed $4\frac{3}{4}$ in., multiply Square Feet by 2 2-3
